Experiment - 3

Student Name: Himanshu Gupta

Branch: BE-CSE

Semester: 5th

Subject Name: PBLJ

UID: 23BCS10889

Section/Group: KRG-2B

Date of Performance: 23/9/25

Subject Code: 23CSH-304

Aim: To write a Java program to calculate the square root of a number entered by the user. Use try-catch to handle invalid inputs (like negative numbers or non-numeric values).

Objective: To understand how to handle invalid inputs using try-catch blocks in java.

Input Used: Java exception classes, try-catch block and Scanner class for input.

Procedure:

1. Prompt the user to input a number.
2. Convert input to a number type using Scanner.
3. Use a try-catch block to handle NumberFormatException and check for negative values.
4. If number is negative, throw exception.
5. If number is valid, print its square root.

Sample Input -

Enter a number: -19

Sample Output -

Error: Cannot calculate square root of a negative number.

Code –

```
package Experiment_Codes;
import java.util.List;
import java.util.Scanner;
import java.util.ArrayList;

class Notvalidinput extends Exception{
    public Notvalidinput(String msg) {
        super(msg);
    }
}

public class exp3 {
```

```
public static void main(String args[]) {
    Scanner sc = new Scanner(System.in);
    System.out.println("Enter num: ");
    int x = sc.nextInt();

    try {
        if (x < 0) {
            throw new Notvalidinput("square root not valid for negatives");
        }

        int low = 1, high = x, ans = 0;
        while (low <= high) {
            int mid = (low + high) / 2;

            if (mid * mid > x) {
                high = mid - 1;
            } else if (mid * mid < x) {
                ans = mid;
                low = mid + 1;
            } else {
                System.out.println(mid);
                return;
            }
        }
        System.out.println(ans);
    } catch (Notvalidinput e) {
        System.out.println("error: " + e.getMessage());
    }
}
```

Output -

```
PS C:\Users\gupta\OneDrive\Desktop\Sem 5\PBLJ> c:: cd 'c:\Users\g
ble-preview' '-XX:+ShowCodeDetailsInExceptionMessages' '-cp' 'C:\U
redhat.java\jdt_ws\PBLJ_6bf3720e\bin' 'Experiment_Codes.exp3'
Enter num:
-1
error: square root not valid for negatives
